AIR DRYERS

Provide Protection for Compressed Air System

AVOID BRAKE FAILURE with Superior Filtration

Today's modern equipment is designed to meet the highest performance standards. Therefore Donaldson is the right choice when it comes to replacement parts. To operate efficiently and correctly, while keeping your maintenance costs under control, using the right filter can save you time and money.

1,000's of litres of clean, dry compressed air per minute are needed to operate your equipment's brake, suspension and other air systems. If the air drying and cleaning system is not maintained correctly, there is a serious risk of damage to braking and suspension components from water and oil contamination.

Donaldson coalescing air dryers provide high levels of protection by removing water and oil vapour, and other contaminants, from the air before reaching air tanks and valves. This prevents equipment corrosion and freeze-up during winter, extending the life of valves and other critical components in air systems.

PERFORMANCE

FULL FLOW - HIGH EFFICIENCY - LONG LIFE

QUALITY

HEAVY-DUTY AND BUILT TO LAST
